

HPE Content Manager 9.1 Patch 5 Build 1263

Released: 19 April 2018

Enhancements

TRIM_00064: Content Manager 9.10 Patch 5 Build 1263

No enhancements for the patch release.

Resolved Known Problems

Change Request [QCCR2D65307](#): Audit log time incorrect for Sri Lanka time zone

Symptom: Audit log value for client machine with Sri Lanka/ Chennai/ Mumbai time zone is incorrect by 30 minutes.

Resolution: Two issues were resolved - an incorrect conversion to local time, and user login/logout events used the time zone of the workgroup server.

Change Request [QCCR2D65864](#): Disposal Processing - Error performing disposal of a consignment record with more than 2 container levels

Symptom: Error performing disposal of a consignment record with more than 2 container levels.

Resolution: Fixed. Disposal of a consignment record with more than 2 container levels is happening now.

Change Request [QCCR2D65948](#): Single Instancing deleting referenced documents on Oracle

Symptom: Single Instancing deleting referenced documents on Oracle.

Resolution: Single instance SQL commands have been fixed for Oracle.

Change Request [QCCR2D66027](#): Microsoft Outlook Integrations - Progress bar not closing and causing them to stack up with each email checked in

Symptom: Progress bar that appears at the bottom of Outlook when checking in an email sometimes presents a new bar each time rather than updating the existing process bar

Resolution: Progress now closes at the end of each action, unless there is an error or warning.
